*Analyst*
- Debt Capital Market & Structured Finance, Financial Institution Group

## SKILLS & ACHIEVEMENTS

---

- Statistical Packages: R, SAS, Stata  
Languages: English (Fluent), Italian (Native), Spanish (Intermediate)  
Completed CFA<sup>®</sup> Level I and II (2014, 2015)  
Awarded the *Investment Foundations* certificate by CFA<sup>®</sup> Institute (2020)  
Bocconi University: Undergraduate Early Admission

## EXTRA

---

University of Florida, Warrington College of Business - Exchange Student	Fall 2012
University of California, San Diego - Exchange Student	Fall 2010
Solbiatese A.C., Semi-Professional Goalkeeper	2006 - 2008
Varese F.C., Professional Goalkeeper (Development)	2003 - 2006

## RESEARCH ABSTRACTS

---

- [1] The Real Effects of Operational Risk: Evidence from Data Breaches

Operational risk poses unique challenges to corporations around the world. However, little is known about the consequences of risk management vulnerabilities on financing costs and firm outcomes. In this paper, I document substantial and persistent effects on financing costs and debt contracting caused by risk management vulnerabilities following data breaches of public firms. Exploiting data breach events between 2005 and 2015, I find that lenders charge breached firms with 15 to 20 percent larger spreads, and tighten covenant intensity, consistent with a shift in control rights over cash flows. The effect is larger for breaches of financial information and malicious cyber-attacks, and for firms with lower attention to risk management. Moreover, financial and operating leverage increases, profitability drops, and firms face a higher probability of distress. Lastly, *ex-ante* mispricing by banks does not explain these findings.

- [2] Do Financial Expertise and Networks Matter in Investing?: Evidence From the Governance of University Endowments

with Gregory W. Brown, Robert S. Harris, & Christian T. Lundblad

We examine the link between endowment investment performance and the expertise of university board members. Harnessing detailed information on 11,019 members for 579 universities, we find that expertise in alternatives and larger professional networks are associated with higher allocations to alternatives and better investment results. Expertise and networks appear particularly important in private equity and venture capital, which are difficult to analyze and manage. The improved investment performance arises because endowments capture higher returns that can accompany alternative assets, select or have access to high performing managers, and minimize fees by accessing funds directly rather than through funds of funds.

- [3] Does Chief Investment Officer Pay Reflect Performance? Evidence from Non-profits  
with Robert S. Harris

This paper provides the first study of compensation and pay-for-performance for top executives at non-profit endowments. Using a detailed breakdown of compensation from IRS filings over the 2009-2017 period, we find that pay packages of Chief Investment Officers (CIOs) depend more heavily on bonuses than do those for other non-profit executives, and that CIO compensation is significantly positively related to endowment performance. Both compensation levels and the sensitivity of pay to performance vary with a foundations financial model, its location and the degree to which it benchmarks other foundations in setting compensation policy.
